# Job Description - Senior PHP Developer

**Breathe Well-Being**

## About Us

We are helping 70M Indians to prevent, manage and reverse Type 2 Diabetes. Through our clinically verified digital well-being program, we help people with Type 2 Diabetes to reduce blood glucose, lose weight and stop medications in a fun and engaging way. We have a coach-led community first approach which we combine with game design to deliver health outcomes. Our Net Promoter Score is 80 and more than 40% of our current customers are coming from word of mouth!

## Our Believers (aka Investors)

Backed by Y Combinator, Accel Partners, General Catalyst and Scott Shleifer, Global MD, Tiger Global, 3One4 Capital, and other leading institutional investors, Breathe Well-being is fortunate to have some of the world's leading investors as it's chief believers.

## Founders

Founders of Breathe Well-being, **Rohan Verma** (Ex McKinsey) and **Aditya Kaicker** (ex-Accenture), childhood friends and now 2nd-time founders, come with a decade of experience in the healthcare space. Having seen and managed these problems for their parents, the founders understand what it takes to help people build behavioural changes that address these chronic diseases and more importantly, what it takes to help patients sustain their health outcomes. This is how the idea of Breathe Well-being came to life.

Rohan is a certified CrossFit L2 trainer and a mindfulness coach and Aditya is an ACE-certified behavioural health coach; together, with their experience in Healthcare consulting, Health Coaching, and Game Design they bring in the right expertise to develop life-changing health programs.

## About the Role

We are looking for a PHP Developer who is dedicated to the craft, writes code that they are proud of, and can hit the ground running. You will be a part of a full-stack creative team that is responsible for all aspects of the ongoing software development from the initial specification, to developing, testing, and launching.

## Requirements

- 5+ years of exp in building web applications using PHP (Laravel framework)
- Very good in build rich UI using HTML/CSS and Jquery
- Result oriented and ready to take ownership
- Good understanding of databases like MySQL, PostgreSQL, etc.

## Responsibilities

- Write clean and well-designed codes
- Produce detailed specifications
- Troubleshoot, test, and maintain the core product software and databases to ensure strong optimization and functionality.
- Contribute to all phases of the development lifecycle
- Follow industry best practices
- Develop and deploy new features to facilitate related procedures and tools if necessary

## Compensation

Industry leading compensation
